

A large white semi-truck is driving on a road at dusk or dawn, with a blurred background suggesting motion. The truck is positioned on the left side of the frame, moving towards the right.

ShipIT

Integrate with 300+ carriers directly from within NAV in the full version, or per carrier in ShipIT Light.

And click, there goes your transport order. Directly from Microsoft Dynamics NAV to Transsmart. The easiest access to 300+ international carriers you can imagine.

One simple solution to deal with all carriers worldwide

ShipIT is the easiest way to manage all your international transport orders directly from within Microsoft Dynamics NAV. You just create your order and ShipIT does the rest. You open your ShipIT application in NAV and simply select your preferred carrier for that particular order. Optionally, you can browse through rates and contracts. As soon as your transport order is set and ready, ShipIT takes over. The only thing you have to do is watch the transport unfold, and concentrate on your other, probably more important tasks.

Integrated carrier communication, via Transsmart, within NAV

ShipIT is developed together with our partner Transsmart. Transsmart is one of the leading logistics data providers and focuses on streamlining communications between carriers and ERP systems. Transsmart knows about hundreds of carrier interfaces, and supplies us one single endpoint to work with in NAV.

Seamless communication and information

ShipIT automatically 'translates' your order to the requirements of the chosen carrier (booking, label printing, email notification, handling of additional documents). So both sides get the information exactly the way they want it: you in Microsoft Dynamics NAV, your counterpart through their interface.

ShipIT

Another smart Microsoft Dynamics NAV add-on by idyn

*Carrier-connectivity to
300+ carriers worldwide*

E-mail notification
